Description

Notes

- Not sure if it supports ceph
 - Not listed on https://docs.cloudstack.apache.org/en/4.18.1.0/conceptsandterminology/choosing_deployment_architecture.html
 - Storage ref: <http://docs.cloudstack.apache.org/projects/archived-cloudstack-administration/en/latest/storage.html>
 - lists ceph for kvm
 - Seems to focus on qcow2 (-> no thin provisioning?)
- Can we setup/run cloudstack in k8s?
 - Seems to be an idea, but far from implementation: <https://github.com/apache/cloudstack/issues/7298>
