Description

Hey William,

please implement a service that let's people submit and discuss what they would love to have supported by IPv6

- Use case A:
    - A user can submit that he / she wants to have IPv6 support for "X" (let's call this "topic")
- Use case B:
    - Users can upvote/agree (no downvote) that they would also like to have IPv6 for a created topic
- Use case C:
    - Users can comment on a topic
        - reddit alike
        - with a comment being able to have a comment as a parent (-> threading)
- For people who are in our ldap indirectly:
    - we need to finish/revamp/cleanup account.ungleich.ch
        - When a user registers, account.ungleich.ch should create a user in otp.ungleich.ch automatically
            - name = username, realm=customer

Before starting, please discuss with Mondi about how to implement it.
