similar manner altering 4th section gives me /64s

The following are the networks

2a0a:e5c0:107:1::/64 > internal

2a0a:e5c0:107:2::/64 > server

2a0a:e5c0:107:3::/64 ==> coworking

Temporarily confed switch5 and 6 in place6, to switchport access vlan 15 (coworking) on port channel 33, because there is no uplink configured by default on vlan 21 dcl-rebuild, i cannot access 2a0a:e5c0:1:7::27 from 2a0a:e5c0:1:7:83d:7d54:b9c4:b0d9/64
