Description

What we do (not) support how. Based on input from <https://twitter.com/gertvdijk/status/1129017514137198597>

Internal networking

Supported on IPv6 basis. We need to discuss / define how to best expose it automated to users. Meeting on 2019-05-20 to discuss.

Console

Repeating feature request -- either via guacamole or Django. To be clarified until 2019-05-20.

Floating IPs

Not supported at the moment - also does not make sense in an infrastructure without private IPv4 space. There might be a way to support it depending on protocol:

- IPv6: Solve via user based networks => users can implement / use keepalived or similar themselves
- IPv4: Might be easiest solved by NAT64 + micro service

History
