Open Infrastructure - Task #7129

Turn the netbox installation into a production setup

09/10/2019 05:26 PM - Nico Schottelius

Status:	Closed		**Start date:**	09/10/2019
Priority:	Normal		**Due date:**	09/15/2019
Assignee:	Il nu		**% Done:**	0%
Category:			**Estimated time:**	0.00 hour
Target version:				
PM Check date:				

Description

- Create a new VM
- Configure it **only** using cdist
    - No manual package installations/configs/etc.!
- Ensure that netbox is started automatically at boot
- Ensure that a DB dump is made once per 1h
    - There is a cdist type / there are types doing this already by crontab
- Ensure there is a backup made to place5
    - ping llnu for this
- DNS name netbox.ungleich.ch
- Migrate our networking / ip address page into netbox
- If possible
    - Connect netbox to our ldap
- Have it tested by llnu
- Document on how to use it (if not obvious)

All instructions/commands are noted to install netbox on alpine. Just need to put it in cdist type.

#3 - 09/19/2019 07:57 AM - Nico Schottelius

Looking forward to see your next cdist type, go ahead Ahmed!

cdist type done. Testing underway. Hopefully, create a PR tomorrow.

#5 - 09/21/2019 08:31 PM - Ahmed Bilal

It is working nicely on alpine linux.

I couldn't be able to make __ungleich_postgresql work on alpine correctly specifically there was some cron error.

@Nico Schottelius Backup thing is left and I need little bit guidance about it. LDAP is also left, I would check it also.

Ahmed,

can you try to figure them out with Balazs together?

- ~~Create a new VM~~
- ~~Configure it only using cdist~~
  - ~~No manual package installations/configs/etc.!~~
- ~~Ensure that netbox is started automatically at boot~~
- ~~Ensure that a DB dump is made once per 1h~~
  - ~~There is a cdist type / there are types doing this already by crontab~~
- ~~Ensure there is a backup made to place5~~ (It is at place5 so the backup should go to place6. So, I set it to go to place6)
- ~~DNS name netbox.ungleich.ch~~
- Migrate our networking / ip address page into netbox
- ~~If possible~~
  - ~~Connect netbox to our ldap~~
- Have it tested by llnu (just asked in infra channel)
- ~~Document on how to use it (if not obvious)~~ I haven't explore it much so my effort would be same as some one who gonna use it. Still, if document is needed from me I would be happy to explore and create it.
