<b>Description</b>			
seems like the configuration place is different on current alpine that what we assumed/what is in our normal config file:			
<pre>[23:01] router2.place5:/etc/consul# cat server.json {   "data_dir": "/var/consul",   "server": true,   "bootstrap_expect": 1,   "disable_update_check": true,   "disable_remote_exec": true,   "enable_syslog": true } [23:01] router2.place5:/etc/consul# cd conf.d/ [23:01] router2.place5:/etc/consul/conf.d# ls config.json  service_node-exporter.json [23:01] router2.place5:/etc/consul/conf.d# cat config.json {   "data_dir": "/var/lib/consul"   , "bind_addr": "2a0a:e5c0::4"   , "client_addr": "2a0a:e5c0::4 ::1 127.0.0.1"   , "datacenter": "place5"   , "disable_remote_exec": true   , "disable_update_check": true   , "encrypt": "...   , "retry_join": ["red1.place5.ungleich.ch", "red2.place5.ungleich.ch", "red3.place5.ungleich.ch"] } [23:01] router2.place5:/etc/consul/conf.d#</pre>			
If possible, I'd probably replace the server.json parts to include the conf.d/config.json or something in more clean so it still works on devuan/debian/ubuntu			

#### History

##### #1 - 01/21/2020 10:32 AM - Timothée Floure

- Status changed from New to In Progress

I got the same issue with `__consul_agent` on Debian, which I am currently fixing upstream.
