Description

Current ceph -s output:

```
  data:
    pools:   9 pools, 2616 pgs
    objects: 33.84M objects, 128 TiB
    usage:   385 TiB used, 150 TiB / 535 TiB avail
    pgs:     181/101521872 objects degraded (0.000%)
             3559/101521872 objects misplaced (0.004%)
             2605 active+clean
             7    active+clean+scrubbing+deep
             3    active+remapped+backfilling
             1    active+undersized+degraded+remapped+backfilling
```

Note especially:

```
    pgs:     181/101521872 objects degraded (0.000%)
             3559/101521872 objects misplaced (0.004%)
```

Can you send a patch or request to ceph upstream to turn the percentage printing into 4 digits after the floating point? i.e. %0.4f is probably what should be feasible.
