Open Infrastructure - Task #8537

Check whether we can support DNS wildcard with our ipv4/ipv6 proxy

Description

Request:

Hi, I have a ipv6only vm have just set up a ipv4 to ivp6 proxy but it does not really work for my subdomain. is it needed that every subdomain is also included in the forwarding or is it possible that you set a wildcard?

We should be able to support this. We are currently using:

```
# HTTPS
    use-server www.ungleich.ch if { req_ssl_sni -i www.ungleich.ch }
# HTTP
    use-server ungleich.ch if { hdr(host) -i ungleich.ch }
```

Need to lookup how to match "ungleich.ch" and '*.ungleich.ch'
