Target version:			
PM Check date:			
Description			
What every you have at home - take it and make it an IPv6 server!			
Take a raspberry pi, a VILRB, an OpenWrt device - make it IPv6 reachable (free IPv6VPN -> ping Jin-Guk or Nico), give it a name (see https://has-a.name for free names), put a webserver, mailserver, jitsi, etherpad on it - show it!			

History
